

An Artist's Legacy (cont.)

(continued from previous page)

affair with a married woman in Santa Barbara. He took his four-door Jaguar and fell asleep at the wheel."

Preserving the Legacy

Randall's only child, William Davey, and Kate Cullum, sister of Isabel Davey, inherited the property. Cullum purchased William Davey's portion and later remodeled the stable to serve as an art gallery for marketing the deceased artist's

work. After Cullum died in 1981, the estate was left to the Randall Davey Committee, and, two years later, the committee donated the property to the National Audubon Society.

"There was an auction of Davey's work in 1985 to spark some interest in his legacy," Beal said. "Kate Cullum, who had moved in after he passed away, was keen on protecting the property and keeping his legacy alive. There was a committee of local folks looking for someone to

take on the property and keep the house open. That committee evolved into the Randall Davey Foundation and in the early 1980s, one of the board members reached out to the National Audubon Society and the rest is history."

In 2020, on the 100th anniversary of Davey's purchase of the property, a new pavilion and Nature Discovery Area were dedicated.

After an abundance of restoration, the artist's house and studio look virtually as they did when the

Daveys lived there.

"His great-niece visited here about five years ago and she had visited him in the 50s and 60s and was blown away by how similar it was to when she was here as a kid," Beal said. "It has that patina of age and that feel of how (Randall and his wife) lived. It's appropriately dusty. Because it has paintings and original furnishings, it still feels lived in and very livable, and it's very warm in that sense. The lovely, natural setting makes it even more special."

“ SHE GAVE ME MY LIFE BACK

Local clinic has modern, medical solution to treat your Peripheral Neuropathy and is seeing incredible results!

"It started out as a normal outing. My wife and I had to run to the grocery store. We were driving down the road casually going over our shopping list when the car ahead of me started to slow down anticipating the yellow light. I started to move my foot from the gas to the brake as any normal person would do when they see brake lights in front of them but I couldn't. I couldn't feel my foot. The car kept moving forward and I just couldn't get my foot on the brake. And CRUNCH! I finally came to a stop when I hit the car in front of me."

This tragic story was shared with us by Dan S. an Albuquerque resident who has peripheral neuropathy. And while no one was hurt in this accident, Dan S. had suffered almost everyday of his life with tingling and burning in his feet until numbness set in and he could no longer feel even the brake pedal beneath his foot.

"The first stage is pain," share Dr. Andrea Brogdon of AAIM| Albuquerque Acupuncture & Integrative Medicine. "You feel burning, tingling, sharp pains, or you feel like you're waking on tacks or marbles. This pain eventually subsides and the numbness sets in. Unfortunately the numbness brings with it a whole other host of problems."

This was the case with Dan. "I said I wasn't going to drive again. What if that had been a pedestrian?"

It is terribly common that peripheral neuropathy and its debilitating symptoms interfere with a person's ability to live their life. Dan was now reliant on his wife to drive him around, even the simple pleasure of cruising through Old Town or taking her out to dinner was outside his capabilities. And even more common, Dan's general practitioner and several specialists told him there was nothing they could do other than prescribe him pills that would ease the pain of his neuropathy.

That's where Dr. Brogdon and her staff at AAIM come in. "About 75% of our current patients come to us suffering from the same condition as Mr. Dan," tells Dr. Brogdon

"They're in constant pain from neuropathy and it prevents them from not only living their lives but more importantly, it prevents them from enjoying it. Depending on the severity of their nerve damage, we typically see tremendous progress in 3-4 months of treatment. I like to say we're in the business of making your golden years golden."

"I can't lie," confides Dan.

"I was skeptical at first. The folks down at UNM told me there was nothing that could be done and then there's a doctor right here in Albuquerque tells me she can help. Turns out she was right! About three months after treatment I was able to confidently drive myself to my appointments! My wife and I celebrated by buying ourselves a new car! It's hard to put into words how incredible this is, quite frankly [Dr. Brogdon] gave me my life back."

While AAIM specializes in acupuncture and it's definitely part of their protocols in treating neuropathy, the real secret is in a more modern medical solution called ATP Resonance BioTherapy™. "This technology was originally developed by NASA to expedite healing and recovery" shares Sarah, a Senior Patient Care Technician at the clinic. "It's like watering a plant. ATP Resonance BioTherapy™ stimulates the blood vessels to grow back around the peripheral nerve and provide them the proper nutrients to heal and repair."

You can learn more about Dr. Brogdon and AAIM by visiting AAIM-ABQ.com. If you're ready to schedule a consultation call (505)355-1984 and do so quickly. AAIM is a very intimate clinic and the staff takes pride in their ability to take their time with each patient so they are very limited in their ability to take on new patients.

Visit AAIM-ABQ.com to learn more and take advantage of their New Patient Offer!
